#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

House Bill 1216 is by request of Office of the Governor. Section 101 requires the Office of the Governor to participate in the interagency Clean Energy Siting Council. We believe this participation can be accomplished within current resources and therefore does not have a fiscal impact.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

Section 101 of House Bill 1216 establishes the Interagency Clean Energy Siting Coordinating Council and grants the Governor's Office of Indian Affairs (GOIA) a seat on the council.

Section 102 give GOIA the task of creating and maintaining a list of contacts at federally recognized tribes, and tribal preferences regarding outreach about clean energy project siting and permitting, such as outreach by developers directly, by state government in the government-to-government relationship, or both.

GOIA anticipates needing to designate .5 FTE of a Program Managers position to serve on the Council, maintain the list of contacts, and act as a liaison with tribal communities.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

GOIA anticipates needing to designate .5 FTE of a Program Managers position to serve on the Council, maintain the list of contacts, and act as a liaison with tribal communities.

Up to \$4000 in one time funding would be needed in the first year to provide equipment, furniture, and office supplies for the position.

Travel, costing at least \$1000/yr, is expected for the Program Manager to carry out the duties of the Council and maintain relationships with tribal communities.

#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

Sec. 101 creates the Interagency Clean Energy Siting Coordinating Council which requires a participant from the Utilities and Transportation Commission. The UTC assumes this participation will begin July 1, 2023, with a large effort in the first year to meet the annual report requirement.

Sec. 102(1) defines the duties of the council, including identifying actions to improve siting and permitting of projects, tracking federal government efforts, conducting outreach, establishing workgroups to focus on specific energy types, creation of any advisory committees, and supporting and updating the outreach to tribes.

Sec 102(2) requires the council, which UTC must be a member of, to provide an annual report by July 1, 2024.

Part 2 Sec. 201 defines various terms. This definition section by nature does not have additional fiscal impact.

Section 202 establishes a process and identifies regulatory assistance available throughout the process for designation as a clean energy project of statewide significance. The Commission is assumed to be one of the "regulatory agencies" that may have to conduct meaningful and timely engagement with potentially affected federally recognized Indian tribes and overburdened communities in this process, as it is defined by Section 201 as a permitting agency, in the case of certain gas projects. This engagement is expected to have fiscal impact with additional Staff time.

Section 203 establishes minimum requirements for applications to the Department of Commerce when entities apply to become clean energy projects of statewide significance. Regulatory agencies, the established council, and permitting agencies are not referenced, and as such this section is not expected to have fiscal impact.

Section 204 establishes a decision process through which the Department of Commerce may designate a project as a clean energy project of statewide significance, in consultation with other state agencies identified as likely to have a role in siting or permitting a project, including the Commission. This consultation is expected to have fiscal impact with additional Staff time, although the process is only applicable for certain gas projects, and as such the additional time is expected to be minimal.

Sec 205 establishes a clean energy navigator role to assist applicants, and all involved with the application and approval process for becoming a clean energy project of statewide significance. The navigator's consultation with the Commission is expected to be included in the Staff time described in section 204 and as such no additional fiscal impact is expected.

Section 206 establishes Dept of Ecology's duties in serving as the point agency within the established clean energy coordinated permitting process. This process is not likely to involve additional consultation with the Commission and as such no additional fiscal impact is expected.

Section 207 establishes the initial assessment process, run by Ecology, for projects deemed clean energy projects of statewide significance by Commerce. This initial assessment process must address the needs and permits of implicated agencies, including the Commission. The process of identifying and processing permits, as well as permission needs has additional fiscal impact.

Section 208 delineates the processes and procedures around a project proponent's request to become a clean energy project of statewide significance. Part of this process may include a meeting of likely participating permit agencies convened within 30 days of acceptance for a fully coordinated permitting process, and the agenda and requirements for meeting participation are delineated. It also requires that each participating agency designate a single point of contact for coordinating with Ecology. Permit and participating agencies may include the Commission and so this has additional fiscal

impact.

Sec. 209 describes agreements between project proponents, cities and counties, and Ecology for expediting projects. The Commission is not described as participating and as such no additional fiscal impact expected.

Sec. 210 describes the potential process for cost reimbursement for ecology and certain participating agencies. This section may mitigate some of the fiscal impact described in other sections of the bill, and this potential for mitigation has been considered. No additional fiscal impact from this section. Through Commission rules, the UTC permits and regulates gas companies and we do not have basis to determine increase of additional permit requests. Therefore, we cannot assume incremental budget requests and have no cash receipt impact.

Sec. 211 describes additional consultation required by Ecology with federally recognized Indian tribes and overburdened communities, independent of and in addition to the consultation that may be required by the Commission in section 204, and as such is not expected to have additional fiscal impact.

Section 212 contains miscellaneous delineations on limitations of powers and law applicability to various entities and is not required to have additional fiscal impact.

Part 3 Sec 301 adds definitions and review provisions for clean energy projects to RCW 43.21C. Certain projects described in (3)(c) may require consultation with the Commission to create a workable schedule for an environmental impact statement and as such has a fiscal impact.

Sec 302 establishes additional parameters for programmatic environmental impact statements. If one of the categories of projects described in (1)(a)-(b) is in investor-owned utility service territory, this may involve consultation with the Commission to determine the scope of the impact.

Sec. 303 describes the use of a programmatic EIS described in section 302 by Ecology and thus is not expected to have fiscal impact to the Commission.

Sec. 304 adds a prohibition on demonstration of need to local government agencies regarding what they require from project applicants. Such description of the extent of powers does not have additional fiscal impact.

Sec. 305 describes a new siting process for pumped storage. If projects implicated in the process are in investor-owned utility service territory, they are assumed to be reviewed through existing planning processes, and as such no additional fiscal impact is expected.

Part 4 Miscellaneous Provisions have no fiscal impact to any agency.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

Section 208 and 210 require clean energy projects of statement significance to enter into a cost-reimbursement agreement with the department of ecology to recovery reasonable costs incurred by the department of ecology and participating agencies for the coordinated permitted process. The UTC assumes to be included as a participating agency as the UTC is identified as a member of the interagency clean energy siting coordinating council and due to our existing regulatory authority. Therefore, the workload and costs incurred in Sections 202, 204, 207, and 208 are assumed to be reimbursable by the project. The UTC assumes, as department of ecology is the primary agency for the process, an interagency agreement would be executed with the participating agencies for cost recovery. The recoverable expenditures are estimated at \$25,075 per fiscal year for the work required by the UTC in the above-mentioned sections.

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

#### Interagency Clean Energy Siting Coordinating Council Representation

Sec. 101 creates the Interagency Clean Energy Siting Coordinating Council which requires a participant from the Utilities and Transportation Commission. The UTC assumes this participation will begin July 1, 2023, with a large effort in the first year to meet the annual report requirement.

FY2024 - \$5,980 total cost and FY2025 and every year after - \$4,485 per year

(Deputy Director | Regulatory Services, 0.01 FTE; Deputy Asst. Director | Regulatory Services, 0.01 FTE; Regulatory Analyst 3, 0.02 FTE)

#### Commission Clean Energy Project Engagement with Tribes and Overburdened Communities

Section 202 establishes a process and identifies regulatory assistance available throughout the process for designation as a clean energy project of statewide significance. The Commission is assumed to be one of the "regulatory agencies" that may have to conduct meaningful and timely engagement with potentially affected federally recognized Indian tribes and overburdened communities in this process, as it is defined by Section 201 as a permitting agency, in the case of certain gas projects. This engagement is expected to have fiscal impact with additional Staff time.

FY2024 and every year after - \$1,765 per year (Director | Legislative, 0.01 FTE)

#### Clean Energy Project Designation Consultation

Section 204 establishes a decision process through which the Department of Commerce may designate a project as a clean energy project of statewide significance, in consultation with other state agencies identified as likely to have a role in siting or permitting a project, including the Commission. This consultation is expected to have fiscal impact with additional Staff time, although the process is only applicable for certain gas projects.

#### FY2024 and every year after - \$7,528 per year

(Deputy Director | Regulatory Services, 0.01 FTE; Deputy Asst. Director | Regulatory Services, 0.01 FTE; Regulatory Analyst 2, 0.01 FTE; Policy Advisor, 0.01 FTE; Asst. Director | Policy, 0.01 FTE)

#### Establish Initial Assessment for Projects Deemed Clean Energy Project

Section 207 establishes the initial assessment process, run by Ecology, for projects deemed clean energy projects of statewide significance by Commerce. This initial assessment process must address the needs and permits of implicated agencies, including the Commission. The process of identifying and processing permits, as well as permission needs has additional fiscal impact.

#### FY2024 and every year after - \$8,746 per year

(Deputy Director | Regulatory Services, 0.01 FTE; Deputy Asst. Director | Regulatory Services, 0.01 FTE; Regulatory Analyst 2, 0.02 FTE; Director | Regulatory Services, 0.01 FTE; Policy Advisor, 0.01 FTE; Asst. Director | Policy, 0.01 FTE)

#### Point of Contact for Post-Acceptance Permitting Process

Section 208 delineates the processes and procedures around a project proponent's request to become a clean energy

Bill # 1216 HB

project of statewide significance. Part of this process may include a meeting of likely participating permit agencies convened within 30 days of acceptance for a fully coordinated permitting process, and the agenda and requirements for meeting participation are delineated. It also requires that each participating agency designate a single point of contact for coordinating with Ecology. Permit and participating agencies may include the Commission and so this has additional fiscal impact.

#### FY2024 and every year after - \$7,036 per year

(Deputy Director | Regulatory Services, 0.01 FTE; Deputy Asst. Director | Regulatory Services, 0.01 FTE; Regulatory Analyst 3, 0.01 FTE; Regulatory Analyst 2, 0.02 FTE)

#### Consultation on Environmental Impact

Part 3 Sec 301 adds definitions and review provisions for clean energy projects to RCW 43.21C. Certain projects described in (3)(c) may require consultation with the Commission to create a workable schedule for an environmental impact statement and as such has a fiscal impact.

FY2024 and every year after - \$1,218 per year (Regulatory Analyst 2, 0.01 FTE)

#### Consultation for Environmental Impact Statements

Sec 302 establishes additional parameters for programmatic environmental impact statements. If one of the categories of projects described in (1)(a)-(b) is in investor-owned utility service territory, this may involve consultation with the Commission to determine the scope of the impact.

FY2024 and every year after - \$1,218 per year (Regulatory Analyst 2, 0.01 FTE)

## Part III: Expenditure Detail

#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

Section 101 requires the Department of Archaeology and Historic Preservation (DAHP) to participate in the new Interagency Clean Energy Siting Coordinating Council. DAHP anticipates needing .1 FTE of a WMS Band 2 position to attend and participate in meetings of the coordinating council.

DAHP anticipates an increased need for coordination with other agencies and tribes on cultural resources, archaeological sites, and sacred sites. The Governor's budget proposes 1 FTE for this work. That proposed funding would be sufficient to meet the staffing needs identified in this bill if the legislature chooses to fund it.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

It is assumed DAHP will need 1 FTE Commerce Specialist 4 to attend meetings of the interagency clean energy siting coordinating council, coordinate with other agencies and tribes on cultural resources, and ensure that a cultural resource survey design and methodology are appropriate for the environmental area being considered.

A Commerce Specialist 4 makes \$82,896 per year (assumed step L) with related benefits estimated at \$29,056 at current benefits rates. Goods and services are estimated at \$6,068 per year and include communications, payroll processing, training, and other staff costs. Estimates include some travel at the low cost per diem rates totaling \$5,254 per year. Also included is one-time equipment costs for furniture and computers totaling \$3,477 in fiscal year 2024.

It is also assumed DAHP will need .1 FTE of an exempt position such as the agency executive director or deputy director to participate in meetings of the Interagency Clean Energy Siting Coordinating Council. The assumed salary is \$97,632 per year x .1 FTE for a total of \$9,763 plus related benefits totaling \$3,174 at current benefits rates. Goods and services are estimated at \$889 per year and include communications, payroll processing, training, and other staff costs. Estimates include some travel at the low cost per diem rates totaling \$175 per year.

#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

See attached WSDOT fiscal note.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

There are no cash receipts resulting from this bill. This bill also does not result in any new fees or taxes, nor does it impact any existing fees or taxes.

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

See attached WSDOT fiscal note.

## Part III: Expenditure Detail

III. A - Operating Budget Expenditures

Non-zero but indeterminate cost and/or savings. Please see discussion.

III. B - Expenditures by Object Or Purpose

Non-zero but indeterminate cost and/or savings. Please see discussion.

#### **Part II: Narrative Explanation**

#### II. A - Brief description of what the measure does that has fiscal impact

Briefly describe <u>by section number</u> (sections that will change WSDOT costs or revenue), the significant provisions of the bill, and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency.

<u>Section 101</u> creates the interagency clean energy siting coordinating council. The department of transportation is named to the new council.

Section 102 establishes the duties of the council. As a council member, WSDOT will assist the department of ecology in development of a consolidated clean energy application for state and local permits and approvals; assist the departments of commerce and ecology in creating implementation plans, timelines and making recommendations for funding or policy changes to improve siting and permitting of clean energy projects.

Section 204 directs WSDOT to review applications for projects of statewide significance (defined in Section 203) if WSDOT is likely to have a role in siting or permitting a project. This section states that there may be an unlimited number of projects of statewide significance that meet the criteria of this section.

<u>Section 205</u> establishes a clean energy navigator to convene select partners from state government and others as appropriate to assist in furtherance of projects of statewide significance.

Section 208 defines the criteria for a fully coordinated project, including that the project raises complex coordination, permit processing, or substantive permit review issues. WSDOT, as a participating permit agency, must designate a single point of contact for coordinating with the department of ecology. Participating permit agencies must attend a work plan meeting for the project and assist in the development of a coordinated permitting process schedule. This section contains specific review requirements.

<u>Section 210</u> establishes a cost reimbursement agreement to recover reasonable costs incurred by the department of ecology and participating agencies in conducting the coordinated permitting process.

<u>Section 301</u> amends 43.21C RCW (State Environmental Policy Act) including a 24-month timeframe for completion of an environmental impacts statement for clean energy projects. The section directs lead agencies to work with participating agencies to develop clear roles and schedules.

<u>Section 302</u> directs the department of ecology to prepare non-project environmental impact statements for renewable hydrogen projects and solar energy projects. WSDOT and others will participate in the review of these documents.

Section 305 directs Washington State University energy program to conduct a least-conflict pumped storage siting process for Washington state, to support expanded capacity to store intermittently produced renewable energy such as from wind and solar, create a map highlighting locations, and include opportunities for engagement with stakeholders. WSDOT is a stakeholder. This must be completed by June 30, 2025.

#### II. B – Cash Receipts Impact

Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

N/A

#### II. C - Expenditures

Briefly describe the agency expenditures necessary to implement this legislation (or savings resulting from this legislation), identifying by section number the provisions of the legislation that result in the expenditures (or savings). Briefly describe the factual basis of the assumptions and the method by which the expenditure impact is derived. Explain how workload assumptions translate into cost estimates. Distinguish between one time and ongoing functions.

The expenditures related to implementing this bill are partially indeterminate.

Sections 101 and 102 related to the creation and duties of the interagency clean energy siting coordinating council. WSDOT is named to the new council. According to the lead agency's assumptions, the council will meet monthly, and the department will be involved in subgroups related to expedited permit work. WSDOT will provide information to incorporate approvals and permits within the department's authority including approvals related to the temporary or permanent use of state transportation rights-of-way, easements, leases, and requests for changes in access to state highways. The department will assist in the development of a consolidated permit application and provide advice from the department's expertise as a developer of large and small projects, with experience as a permit applicant. The collaborative effort is estimated to require 0.10 FTE (16 –20 hours per month) of a Transportation Planning Specialist 5 in fiscal years 2024 and ongoing. It is unclear when the council will begin meeting each month, but the assumption is July 2023. The department assumes existing staff will provide policy direction and additional technical support. Streamlined processes would result in updates to Chapter 1130 (Development Services) of the Design Manual and the WSDOT Utility Accommodation Policy. These manual updates would be done with existing staff.

Section 204 directs the department to review applications for projects of statewide significance (defined in Section 203) if WSDOT is likely to have a role in siting or permitting a project. This section states that there may be an unlimited number of projects of statewide significance that meet the criteria of this section. The department assumes staff time will be required to review these applications. We estimate each application will require 8 - 16 hours to review to allow time for internal coordination. With an unlimited number of applications, the cost associated with this task is <u>indeterminate</u>.

Section 205 and 208 would require the department, if identified as a state agency that must engage in a particular *fully* coordinated project, to designate a single point of contact for coordinating with the department of ecology. Participating permit agencies must attend a work plan meeting for the project and assist in the development of a coordinated permitting process schedule. This section contains specific review and collaboration requirements.

Current staffing: WSDOT regions have development services staff that responds to land use development proposals and projects led by local jurisdictions, transit agencies, tribes, private developers, and property owners. These staff focus actions with the potential to adversely impact the function of state highways. However, the collaborative scheduling, planning and permit processing work in Sections 205 and 208 would be new. The staff time associated this new work is difficult to estimate because it will depend on the type of proposed project, its location, and the extent to which WSDOT approvals and reviews are required. In addition, the department assumes that the process improvements developed in accordance with Sections 101 and 102 will result in efficiencies and time savings. The department assumes there will be an increase in the volume of clean energy project review requests. The department is unable to estimate the number of new projects that will require review. Therefore, the workload increase is <u>indeterminate</u>.

Section 210 establishes a cost reimbursement agreement to recover reasonable costs incurred by the department of ecology and participating agencies in conducting the coordinated permitting process on a specific proposed project. There is no new fiscal impact associated with this section since the department currently enters into reimbursement agreements with project proponents. This reimbursement is not classified as a fee.

Section 301 amends 43.21C RCW (State Environmental Policy Act) including a 24-month timeframe for completion of an environmental impacts statement for clean energy projects. The section directs lead agencies to work with participating agencies to develop clear roles and schedules. The department assumes the work required by Sections 101 and 102 will cover WSDOT's collaboration with Ecology on the development of clear roles and schedules.

<u>Section 302</u> directs the department of ecology to prepare non-project environmental impact statements for renewable hydrogen projects and solar energy projects. WSDOT will participate in the review of these environmental documents and may provide our department's expertise. The department assumes this will be done with existing staff resources.

Section 305 directs Washington State University energy program to conduct a least-conflict pumped storage siting process for Washington state, and to create a map and associated GIS data layers highlighting locations and include opportunities for engagement with stakeholders. WSDOT is a stakeholder. The department will require staff time to review and evaluate the siting process and the proposed map. The department assumes this work will relate to the siting process streamlining in Sections 101 and 102, and the review of the GIS data products will be done with existing staff resources.

Narrative Explanation (Required for all Taxes and/or Fees including "Indeterminate," "Partially Indeterminate," or "No Cash Receipts.")

- Brief Description of What the Measure does that has I-960 Implications
  Briefly describe by section number, the provisions of the bill that make it subject to the requirements of I-960.
- Cash Receipts Impact
  Briefly describe and quantify the cash receipts impact to the legislation on the responding agency, including rates, assumptions, and an explanation if the cash receipts are indeterminate.

There are no cash receipts resulting from this bill. This bill also does not result in any new fees or taxes, nor does it impact any existing fees or taxes.

#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

Under current law, there are 41 potential different permits that the Department of Ecology (Ecology) can provide for a clean energy project.

This bill would add new sections to chapter 43.21C RCW, chapter 36.70B RCW and Title 43 related to siting and permitting for new clean energy projects.

Section 101 would establish an Interagency Clean Energy Siting Coordinating Council (Coordinating Council) co-led by Ecology and the Department of Commerce (Commerce) with participation from Washington State's Office of the Governor, Energy Facility Site Evaluation Council (EFSEC), Department of Fish and Wildlife (DFW), Department of Agriculture (Agriculture), Office of Indian Affairs, Department of Archaeology and Historic Preservation, Department of Natural Resources (DNR), Department of Transportation (DOT), Utilities and Transportation Commission (UTC), Office of Regulatory Innovation and Assistance (ORIA), and other agencies invited by Commerce and Ecology on an ad hoc basis. Ecology and Commerce would be required to assign staff to lead work and provide updates to the Governor and legislature.

Section 102 would require the newly established Coordinating Council to complete the tasks as outlined in the bill. An annual report to the governor and legislature would be due starting July 1, 2024. Ecology would also be required to advise Commerce in contracting for an evaluation of state agency siting and permitting processes and requirements to be done by July 1, 2024. Ecology would be required to pursue development of a consolidated clean energy application, with a report due to the governor and legislature by December 31, 2024. Ecology would be required to make recommendations to the legislature on developing a consolidated permit for clean energy by October 1, 2024.

Section 202 would establish a process for clean energy applicants to apply to Commerce to be designated a clean energy project of statewide significance. Ecology would be required to lead the coordinated permit process described under section 206 of this bill.

Section 203 would require Commerce to develop an application for the designation of clean energy projects as clean energy projects of statewide significance. Commerce would be required to determine whether to designate an applicant's project as a clean energy project of statewide significance within 60 days.

Section 205 would establish the role of clean energy project navigators at Commerce to assist in the assessment and convening agencies, stakeholders and organizations.

Section 206 would require Ecology to establish and lead a clean energy permitting process for projects designated as clean energy projects of statewide significance. Ecology would be required to serve as a central point of contact, coordinate with the applicant, state agencies, and local agencies, conduct an initial assessment of the proposed project review and permitting actions, ensure that project proponents are informed, facilitate communication between project proponents and agency staff, verify process steps are complete, assist in resolving conflict or inconsistency, consult with federally recognized tribes, engage with potentially affected overburdened communities, manage a fully coordinated permitting process, and coordinate with local jurisdictions.

Section 207 would require Ecology to conduct an initial assessment within 60 days of Commerce's designation of the project as a clean energy project of statewide significance to determine the level of coordination necessary with consideration to complexity, size, and need for assistance. The assessment would be required to be documented in writing and provided to the project proponent and the public.

Section 208 would require Ecology to lead and establish a fully coordinated permitting process as outlined in the bill. Ecology would be required to convene a work plan meeting within 30 days, or longer with agreement of the project proponent, attended by the project proponent, Commerce, and participating permit agencies to develop a coordinated permitting process schedule. Ecology would be required to notify any relevant federal agency or federally recognized Indian tribe of the meeting date and invite them to participate in the process. Upon completion of the meeting, Ecology would be required to finalize the schedule and share it in writing with the project proponent, participating state agencies, lead agencies as identified under chapter 42.21C RCW, cities and counties subject to an agreement as specified under section 209 of this bill, and the public. Ecology would be required to notify all parties of adjustments to the schedule and if necessary, convene another work plan meeting.

Section 209 would provide a process for local governments to enter into agreements with Ecology and project proponents to expedite the completion of projects.

Section 210 would require project proponents to enter into a cost-reimbursement agreement with Ecology to cover the cost of Ecology and other agencies in carrying out a fully coordinated permitting process.

Section 211 would require Ecology to offer early, meaningful, and individual consultation with any affected federal recognized Indian tribe on designated clean energy projects of significance. Ecology would be required to identify overburdened communities that may be potentially affected by a designated project and verify they have been meaningfully engaged.

Section 301 would add a new section to Chapter 43.21C RCW to require a lead agency under the State Environmental Policy Act (SEPA) to notify an applicant if there is an anticipated finding of significance for a project. If an environmental impact statement (EIS) is required, it would be required to be completed within 24 months and a timeline prepared.

Section 302 would add a new section to Chapter 43.21C RCW to require Ecology to prepare one programmatic EIS for green hydrogen in Washington state and one for solar energy in the Columbia Basin, using the results of the least conflicting mapping done there. The scope would be required to include opportunities for engaging with Tribes, overburdened communities, and stakeholders.

Section 303 would add a new section to Chapter 43.21C RCW to require the lead agency performing a SEPA review use the programmatic EIS.

Section 304 would add a new section to Chapter 36.70B RCW to remove the requirement for an applicant for a clean energy project to demonstrate a need or utility of the project.

Section 305 would require Washington State University to conduct a least conflict mapping study for pumped storage sites in Washington state by June 30, 2025.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

The cash receipts impact to Ecology is indeterminate for future cost reimbursement agreements under section 210.

Ecology assumes we would enter into cost reimbursement agreements with project proponents to cover costs in carrying out permitting processes as specified in section 210. Future cost reimbursement agreements are unknown; therefore, the cash receipts are indeterminate (General Fund Private/Local).

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

The expenditure impact to Ecology under this bill is estimated to be greater than \$50,000 in Fiscal Year (FY) 2024 and ongoing to implement the requirements of sections 101, 102, 206, 207, 208, 210, 211, 301, and 302. In addition, there are indeterminate expenditures for future cost reimbursement agreements under section 210.

Note: The Governor's 2023-25 proposed operating budget includes funding for some of the requirements of this bill as follows:

- Clean Energy Permitting \$6,308,000 and 19.5 FTEs (CEP Clean Energy Permitting)
- Programmatic EIS for Green Hydrogen \$2,000,000 and 2.3 FTEs (CE1 Green Hydrogen Projects) and Programmatic EIS for Solar Energy in the Columbia Basin \$996,000 and 1.6 FTEs (CE2 Solar Energy Projects)

Expenditures are estimated in the Climate Commitment Account consistent with the Governor's proposed budget.

Expenditures to co-lead the Council (\$217,938 and 1.2 FTE in FY 2024 and ongoing) are not included in the Governor's budget.

Section 101 and 102 Interagency Clean Energy Siting Coordinating Council

Ecology assumes that co-leading the Interagency Clean Energy Siting Coordinating Council with Commerce would require staff to participate in the council, provide updates to the Governor and legislature, provide input and help with the annual report, advise on contracting for an evaluation of the state agency siting and permitting processes and requirements, and participate in workgroups or advisory committees. In addition, Ecology would make recommendations for developing a consolidated permit for clean energy and pursue the development of a consolidated clean energy application. Ecology estimates that this work would require 1.0 FTE WMS 2 starting in FY 2024 and ongoing to serve in the lead role for the agency.

Ecology assumes that 2.0 FTE Environmental Planner 4 identified below under "permit navigators" would support this position in all the work necessary to track, facilitate, and coordinate all the work at Ecology required by this bill.

Sections 206, 207, 208, 210, 211, 301 Clean Energy Permitting

Ecology assumes that many of the new clean energy projects will be processed through EFSEC, but because clean energy projects can choose to opt-in to the EFSEC process, some projects will be permitted by Ecology. Ecology staff contract with EFSEC to provide the technical review and permit writing functions that EFSEC requires for its own process. For projects not using the EFSEC process, Ecology would be the lead for issuing the permit and conducting a technical review. Permits and environmental review for energy and manufacturing projects are traditionally highly complex permits. The permit process for such projects is also complex, needing to meet many federal, state, and local requirements, while engaging the public, Tribes, interested parties, and communities in the process. The analysis and documentation required is resource intensive.

Ecology assumes that to meet the requirements of this bill additional permit writers for the expedited permitting of clean energy projects and "process navigators" to further assist in efficient processing of permits would be needed. New staff would perform the following functions:

A team of Clean Energy Permit Writers are needed for proposals requiring permits in the following areas: NPDES/water quality, air quality, water rights, Section 401, CZM, wetlands and shorelands. Staff would conduct direct, expedited review of proposals requiring Ecology permits and provide the necessary technical assistance for proposals following the EFSEC process.

SEPA project managers would guide and complete environmental reviews either as lead SEPA agency, or through technical assistance to EFSEC and local government. In addition, staff would provide technical assistance and customer support to cities and counties to support inclusive, thorough analysis and engagement for clean energy planning.

Permit navigators would aid applicants throughout permit processes. Navigators would provide an initial entry point to Ecology for clean energy project applicants, delivering overarching permitting information and facilitating cross program, pre-application meetings. Navigators would also assist with outreach to Tribes, affected cities and counties, and overburdened communities.

Ecology would support the development of Programmatic EISs and planned actions to identify, evaluate, and address potential impacts for possible sites and/or types of clean energy projects. The more comprehensive the environmental analysis is during the planning stage, the less review is needed during individual project review. In the case of planned actions, the review is already done. Projects would be able to use the analysis already done and conduct additional analysis for environmental issues not addressed during the planning stage. Prior review can result in significant time savings if the review was done in the recent past, thoroughly assessed impacts, and/or if the project is on preidentified build-ready sites.

Based on an estimate of 30 clean energy projects per biennium and recognizing that each kind of project would trigger different permit/review needs, Ecology would require ongoing funding for 19.6 FTEs and support from the Attorney General's Office (AGO) to manage this new workload identified in sections 206, 207, 208, 210, 211, and 301 as follows:

Permit Navigators: Ecology assumes that staff would be needed to support the co-lead to the council and the work that is required under section 101 and 102, as well as to track, facilitate, and coordinate all the work at Ecology. Therefore, Ecology estimates 2.0 FTE Environmental Planner 4 to serve as coordinators on contracts, interagency agreements, and cost reimbursement agreements, organize pre-application meetings with applicants, assist with Tribal communications and outreach, ensure HEAL act requirements are followed (as applicable), identify and address environmental justice issues, coordinate with EFSEC and other state, federal, and local agencies, and serve as agency leads to coordinate across the program and with regional planners as needed.

State Environmental Policy Act (SEPA): Ecology assumes that Ecology will be SEPA lead or co-lead on some proposals. Ecology further assumes that under WAC 197-11-938, if EFSEC is not lead, for a project with one million gallons of liquid fuel or more, Ecology would be the lead. Examples of this type of project could include biofuel and green hydrogen. Therefore, Ecology estimates that 1.0 FTE Environmental Planner 5 and 1.0 FTE Environmental Planner 4 would be needed to coordinate and lead the SEPA process when Ecology is SEPA lead or co-lead agency, including more controversial and complex projects.

Section 401 Water Quality and or Coastal Zone Management (CZM) Consistency: Ecology assumes that a Section 401 Water Quality project would need a federal permit, that a CZM Consistency permit would be needed for some projects, and that wetland review would be required if the proposal impacts wetlands. Therefore, Ecology estimates that 1.0 FTE Environmental Specialist 5 and 1.0 FTE Environmental Specialist 4 would be needed to complete permits for Section 401 Water Quality and/or CZM Consistency, wetlands review, and shoreline permitting.

Programmatic Environmental Impact Statements (EIS): Ecology assumes that separate funding for local governments, communities, and tribes to participate in the planning process would be needed. Ecology further assumes that there would be planning efforts where a programmatic EIS or planned action would be conducted and Ecology would provide support or lead the environmental review. Therefore, Ecology estimates that 1.0 FTE Environmental Planner 5 and 1.0 FTE Environmental Planner 4 would be needed to lead the programmatic EIS work on clean energy siting, to provide SEPA technical assistance and customer support, and to conduct outreach.

Water Rights Permits: Ecology assumes that water will likely be needed for some projects. Ecology estimates that the level of effort required on a permit will depend on regulated status of the water body in question, the total volume of water needed, and whether the water is consumptive. Ecology further assumes that permits would require ongoing maintenance.

Therefore, Ecology estimates that 1.0 FTE Environmental Specialist 5 and 1 FTE Hydrogeologist 3 would be necessary to complete and maintain permits for water rights, either new or changed.

Construction Stormwater Permits and other General NPDES Permits: Ecology assumes that projects will need coverage under the construction stormwater permit and other general NPDES permits. Ecology further assumes that individual NPDES or state permits are also likely due to the use of water in processes and that the individual permit writer to permit ratio recommended would be at = 1:10 due to higher level of service necessary under this bill. Therefore, Ecology estimates that 1.0 FTE Environmental Specialist 4 and 3 FTE Environmental Engineer 5 would be necessary to expedite general permit administration and coordinate with Ecology and EFSEC.

Air Quality Permits: Ecology assumes that the work required by this bill would involve significant air permitting, including Prevention of Significant Deterioration permits, Air Operating permits, and Notice of Construction permits. Therefore, Ecology estimates that 2.5 FTE Environmental Engineer 3 and 0.50 FTE Natural Resource Scientist 4 would be necessary to complete the permits required.

In consultation with the AGO, Ecology assumes that AGO support is necessary to complete the work required by this bill. Therefore, consistent with the AGO, Ecology estimates a need for 1.0 AAG FTE at a cost of \$257,000 in FY 2024 and ongoing to advise Ecology on implementation of expected permitting process, specific permitting questions, and to represent Ecology in legal challenges and appeals.

#### Section 210 Cost Reimbursement Agreements

Ecology assumes we would enter into cost reimbursement agreements with project proponents to cover costs in carrying out permitting processes as specified in section 210. Future cost reimbursement agreements are unknown; therefore, the expenditures are indeterminate (General Fund Private/Local).

#### Section 301 SEPA Changes

Section 301 would add a new section to Chapter 43.21C RCW to require a lead agency under the State Environmental Policy Act (SEPA) to notify an applicant if there is an anticipated finding of significance for a project. If an environmental impact statement (EIS) is required, it would be required to be completed within 24 months and a timeline prepared. Ecology assumes that this change would not require an amendment to Ecology's rules at WAC 197-11-800. Ecology assumes that the statutory changes include definitions and provides additional clarifications to SEPA review processes that apply specifically to clean energy projects. Ecology assumes that these changes can be implemented without requiring further clarification in rule.

#### Section 302 Programmatic Environmental Impact Statements

Section 302 would add a new section to Chapter 43.21C RCW to require Ecology to prepare one programmatic EIS for green electrolytic and renewable hydrogen in Washington state and one for solar energy in the Columbia Basin, using the results of the least conflict mapping done there. The scope would be required to include opportunities for engaging with Tribes, overburdened communities, and stakeholders.

Programmatic Environmental Impact Statement (PEIS) for Green Hydrogen: Based on previous experience, Ecology assumes that this PEIS will require 24 months. Ecology estimates that 1.0 FTE Environmental Planner 5 and 1.0 FTE Environmental Planner 4 in FY 2024 and FY 2025 would be required to perform a gap analysis to identify typical requirements for siting green hydrogen, conduct a PEIS with statewide analysis based on the needs for the project sites to cover potential impacts and mitigation. Ecology estimates that \$400,000 in FY 2024 and \$600,000 in FY 2025 would be required for a contract with a consultant to manage meetings, manage comments, and prepare a report. Ecology further estimates that \$157,000 each year in FY 2024 and FY 2025 would be needed to fund state interagency agreements for work by multiple experts from other state agencies, based on potential impacts. Ecology assumes that the gap analysis required

for a PEIS could be completed using information from Commerce and EFSEC, and the clean energy permit navigators and funding identified above. Ecology also assumes that funding for Tribes, communities, and local government participation, through grants/other funding, would not be included in Ecology's costs. Therefore, no estimate is made for their participation in this effort.

Programmatic EIS for Solar Energy in the Columbia Basin: Based on previous experience, Ecology assumes that this PEIS will require 24 months. WSU's least conflict mapping is already underway, and Ecology assumes that the results would be available to be used to identify areas for further study. Ecology estimates that 1.0 FTE Environmental Planner 5 and 0.40 FTE Environmental Planner 4 in FY 2024 and FY 2025 would be required to perform a gap analysis to identify typical requirements for siting, conduct a PEIS with statewide analysis based on the needs for the project sites to cover potential impacts and mitigation. Ecology estimates that \$250,000 in FY 2024 and FY 2025 would be required for a contract with a consultant to manage meetings, manage comments, and prepare a report. Ecology also assumes that funding for Tribes, communities, and local government participation, through grants/other funding, would not be included in Ecology's costs. Therefore, not estimate is made for their participation in this effort.

SUMMARY: The expenditure impact to Ecology under this bill is:

Sections 101 and 102 for Co-Leading Interagency Clean Energy Siting Coordinating Council FY 2024 and ongoing: \$217,938 and 1.2 FTEs

Sections 102, 206, 207, 208, 210, 211, 301 to support the Co-lead for the Interagency Clean Energy Siting Coordinating Council, establish and lead a clean energy permitting process for projects designated as clean energy projects of statewide significance, carry out cost-reimbursement agreements, consult with affected federal recognized Indian tribes, and provide support for the SEPA process, serve as SEPA lead agency, and carry permitting requirements.

FY 2024 and ongoing: \$3,136,481 and 19.6 FTEs

Section 302 Programmatic EIS for Green Hydrogen is estimated to require:

FY 2024: \$897,621 and 2.3 FTEs FY 2025: \$1,097,621 and 2.3 FTEs

Section 302 Programmatic EIS for Solar Energy in the Columbia Basin is estimated to require:

FY 2024: \$496,121 and 1.6 FTEs FY 2025: \$496,121 and 1.6 FTEs

The TOTAL Expenditure impact to Ecology under this bill is estimated to be:

FY 2024: \$4,748,161 and 24.6 FTEs FY 2025: \$4,948,161 and 24.6 FTEs

FY 2026 and ongoing: \$3,354,419 and 20.7 FTEs

Notes on costs by object:

Salary estimates are current biennium actual rates at Step L.

Benefits are the agency average of 36% of salaries.

Contracts includes \$650,000 in FY 2024 and \$850,000 in FY 2025 for consultant participation in the programmatic EIS's required under section 302.

Goods and Services are the agency average of \$5,224 per direct program FTE. Goods and Services also includes AGO costs of \$257,000 in FY 2024 and ongoing, and \$153,000 in FY 2024 and FY 2025 for interagency agreements with other state agencies for the Green Hydrogen PEIS.

Travel is the agency average of \$1,563 per direct program FTE.

Equipment is the agency average of \$1,031 per direct program FTE.

Agency Administrative Overhead is calculated at the federally approved agency indirect rate of 28.75% of direct program salaries and benefits, and is shown as object 9. Agency Administrative Overhead FTEs are included at 0.15 FTE per direct program FTE, and are identified as Fiscal Analyst 2 and IT App Development - Journey.

## Part III: Expenditure Detail

#### III. A - Operating Budget Expenditures

| Account | Account Title      | Type     | FY 2024   | FY 2025   | 2023-25   | 2025-27   | 2027-29   |
|---------|--------------------|----------|-----------|-----------|-----------|-----------|-----------|
| 26C-1   | Climate Commitment | State    | 4,748,161 | 4,948,161 | 9,696,322 | 6,708,838 | 6,708,838 |
|         | Account            |          |           |           |           |           |           |
|         |                    | Total \$ | 4,748,161 | 4,948,161 | 9,696,322 | 6,708,838 | 6,708,838 |

In addition to the estimates above, there are additional indeterminate costs and/or savings. Please see discussion.

#### III. B - Expenditures by Object Or Purpose

|                                  | FY 2024   | FY 2025   | 2023-25   | 2025-27   | 2027-29   |
|----------------------------------|-----------|-----------|-----------|-----------|-----------|
| FTE Staff Years                  | 24.6      | 24.6      | 24.6      | 20.7      | 20.7      |
| A-Salaries and Wages             | 2,010,767 | 2,010,767 | 4,021,534 | 3,377,148 | 3,377,148 |
| B-Employee Benefits              | 723,876   | 723,876   | 1,447,752 | 1,215,774 | 1,215,774 |
| C-Professional Service Contracts | 650,000   | 850,000   | 1,500,000 |           |           |
| E-Goods and Other Services       | 521,794   | 521,794   | 1,043,588 | 702,064   | 702,064   |
| G-Travel                         | 33,449    | 33,449    | 66,898    | 56,270    | 56,270    |
| J-Capital Outlays                | 22,064    | 22,064    | 44,128    | 37,118    | 37,118    |
| 9-Agency Administrative Overhead | 786,211   | 786,211   | 1,572,422 | 1,320,464 | 1,320,464 |
| Total \$                         | 4,748,161 | 4,948,161 | 9,696,322 | 6,708,838 | 6,708,838 |

In addition to the estimates above, there are additional indeterminate costs and/or savings. Please see discussion.

III. C - Operating FTE Detail: List FTEs by classification and corresponding annual compensation. Totals need to agree with total FTEs in Part I and Part IIIA

| Job Classification       | Salary  | FY 2024 | FY 2025 | 2023-25 | 2025-27 | 2027-29 |
|--------------------------|---------|---------|---------|---------|---------|---------|
| ENVIRONMENTAL ENGINEER 3 | 98,592  | 2.5     | 2.5     | 2.5     | 2.5     | 2.5     |
| ENVIRONMENTAL ENGINEER 5 | 108,804 | 3.0     | 3.0     | 3.0     | 3.0     | 3.0     |
| ENVIRONMENTAL PLANNER 4  | 89,292  | 5.4     | 5.4     | 5.4     | 4.0     | 4.0     |
| ENVIRONMENTAL PLANNER 5  | 98,592  | 4.0     | 4.0     | 4.0     | 2.0     | 2.0     |
| ENVIRONMENTAL SPEC 4     | 73,260  | 2.0     | 2.0     | 2.0     | 2.0     | 2.0     |
| ENVIRONMENTAL SPEC 5     | 80,952  | 2.0     | 2.0     | 2.0     | 2.0     | 2.0     |
| FISCAL ANALYST 2         |         | 2.1     | 2.1     | 2.1     | 1.8     | 1.8     |
| HYDROGEOLOGIST 3         | 87,144  | 1.0     | 1.0     | 1.0     | 1.0     | 1.0     |
| IT APP DEV-JOURNEY       |         | 1.1     | 1.1     | 1.1     | 0.9     | 0.9     |
| NAT RESOURCE SCIENTIST 4 | 91,524  | 0.5     | 0.5     | 0.5     | 0.5     | 0.5     |
| WMS BAND 2               | 120,000 | 1.0     | 1.0     | 1.0     | 1.0     | 1.0     |
| Total FTEs               |         | 24.6    | 24.6    | 24.6    | 20.7    | 20.7    |

#### III. D - Expenditures By Program (optional)

NONE

# Part IV: Capital Budget Impact

IV. A - Capital Budget Expenditures NONE

IV. B - Expenditures by Object Or Purpose

NONE

#### IV. C - Capital Budget Breakout

Acquisition and construction costs not reflected elsewhere on the fiscal note and description of potential financing methods.

**NONE** 

IV. D - Capital FTE Detail: FTEs listed by classification and corresponding annual compensation. Totals agree with total FTEs in Part IVB.

**NONE** 

# Part V: New Rule Making Required

Provisions of the bill that require the agency to adopt new administrative rules or repeal/revise existing rules.

#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

Section 101 of this bill would require a representative from the Energy Facility Site Evaluation Council to serve on an interagency clean energy siting coordinating council to improve siting and permitting of clean energy projects. The coordinating council is responsible for providing an annual report to the Governor and Legislature beginning July 1, 2024, summarizing progress on efficient, effective, and responsible siting and permitting of clean energy projects and identifying needed policy changes.

The Energy Facility Site Evaluation Council assumes the coordinating council will meet periodically through the year on an ongoing basis. Fiscal impact includes staff time and potential travel required to participate in the Interagency Clean Energy Siting Coordinating Council.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

Sec. 101 requires the Energy Facility Site Evaluation Council (EFSEC) to participate as a member of the interagency clean energy siting coordinating council. EFSEC assumes the Director of Administration will be selected as the representative and to meet the goals and duties of the coordinating council, this will take on average 0.1 FTE per month.

It is assumed that participating in the coordinating council will result in periodic meetings whether online or in-person. In-person meetings will result in travel costs for EFSEC. A round-trip distance of 7.8 miles was used (the distance from the EFSEC office to the Department of Commerce) at a frequency of once per month to attend the meetings.

# Part III: Expenditure Detail

#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

Section 101 directs WDFW to serve on the Clean Energy Siting Coordinating Council.

Section 209 requires an expedited project timeline. This will result in projects moving forward at a quicker rate. Therefore, WDFW analysis and guidance will be needed at an increased rate.

Section 302 directs Ecology to complete non-project Environmental Impact Statements (EIS) for renewable energy projects to assess habitat and connectivity corridors. WDFW will provide research, data collection and compilation, and other information on habitats and species under various scenarios.

Section 305 directs WSU to conduct a least-conflict pumped storage siting process. As with the least-conflict solar siting process, WDFW will work closely with WSU, participate in workgroups, collect and provide data, and otherwise participate in this process.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

Section 101 requires 0.5 FTE Environmental Planner 3 in fiscal year 2024 and ongoing to serve on the Interagency Clean Energy Siting Coordinating Council, participate in monthly virtual meetings, review written materials, and prepare presentations.

Section 209 requires 0.5 FTE Environmental Planner 3 in fiscal year 2024 and ongoing to review project proposals for habitat and species considerations.

Section 302 requires 0.3 FTE Environmental Planner 3 in fiscal year 2024 and ongoing to collect and provide habitat and corridor data for non-project Environmental Impact Statements (EIS), participate in monthly virtual meetings, and review draft materials.

Section 305 requires 0.2 FTE Environmental Planner 3 in fiscal year 2024 and ongoing to participate in least-conflict pumped storage process, collect, and provide habitat data, and participate in monthly virtual meetings.

Salaries and benefits total \$166,000 in fiscal year 2024 and ongoing.

Goods and services, Object E, includes \$9,000 per FTE, per year, for WDFW standard costs, which cover an average employee's supplies, communications, training, and subscription costs per year. An infrastructure and program support rate of 33.5% is included in object T and is calculated based on WDFW's federally approved indirect rate.

## Part III: Expenditure Detail

#### III. A - Operating Budget Expenditures

| Account | Account Title | Type     | FY 2024 | FY 2025 | 2023-25 | 2025-27 | 2027-29 |

#### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

HB 1215, concerning the protection and restoration of riparian areas, creates new sections to chapter RCW 43.21C, adds a new section to chapter RCW 36.70B, and adds new chapters to Title 43 RCW.

New Sec. 1: Creates Legislative to support efficient, effective siting and permitting of clean energy projects through a variety of interventions, including establishing an interagency clean energy siting coordinating council to improve siting and permitting of clean energy projects.

New Sec 101: Creates the interagency clean energy siting coordinating council and covers the council responsibilities. This section establishes that the coordinating council is co-chaired by the department of commerce and the department of ecology with participation from various agencies including Agriculture.

In this bill, the council is required to provide an annual report beginning July 1, 2024, to the governor and the appropriate committees of the legislature summarizing progress on efficient, effective, and responsible siting and permitting of clean energy projects; areas of additional work, including where clean energy project siting and permitting outcomes are not broadly recognized as efficient, effective, or responsible; resource needs; and any needed policy changes.

The new body of ongoing work created in this bill would require a part time WMS Bank 2 level position at WSDA to manage. This position would serve on the coordinating council, other ad hoc advisory groups, and engage in the work associated with this bill at a high level for policy and local land use and science assessments. Related costs to the agency would include salaries, benefits, supplies, and overhead for the .10 FTE WMS 2 position.

#### II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

WSDA does not set, administer, or collect the tax or fee revenue contained in this bill.

#### II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.

A WMS2 Manager at 0.10 FTE is needed to full the duties and requirements of the bill. This position would serve as a member of the council or other ad hoc groups and support all phases of Policy and Science Liaison work with the interagency clean energy siting coordinating council. This WSDA staff member would be expected to participate in the siting processes under established time tables, and provide a variety of reports to the Governor and the appropriate committees of the legislature by various deadlines. Lead agency assumptions include monthly meetings and other ad hoc advisory group sessions as needed. No travel is assumed required to these meetings.

# Part III: Expenditure Detail
