## Part II: Narrative Explanation

### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

*Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.*

Section 1 of this bill adds the social security number and Washington State learner’s permit as a methods of identification documents for electronic voter registration applications. Additionally, it adds clarification that the tribal identification must be current.

### II. B - Cash receipts Impact

*Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.*

### II. C - Expenditures

*Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.*

This bill requires the OSOS to modify the voter registration system to allow for a secure method to submit valid voter registration applications using tribal identification or social security number. OSOS estimates this would take approximately 300 hours of development time at \$200 per hour, for a total cost of \$60,000. Additionally, the design and user interface of VoteWA would need to be altered to accommodate these additional languages, necessitating design and usability consultants. Approximately 500 hours of design, usability, and accessibility testing to would be needed to verify functionality of these changes, for a total cost of \$87,500. OSOS would use contractors for these services. These are one-time costs.

The impact of validating the identity of the submitter without a Drivers License is indeterminate. To validate, an alternative identify verification method would have to be introduced for those non-Driver License transitions. Current costs per transaction for the leading identity verification vendors are \$1.30-\$0.85 (determined by monthly volume), and additional implementation and support fees for setup and ongoing support.

Monthly online voter registration transactions range between 3,500 and 25,000. We have no data from which to extrapolate how many transactions would be non-Driver License. If we assume 10,000 per month, which is possible based on current registrations referred from the Health Benefits Exchange (HBE), we’d likely be in the most expensive range of \$1.30 per or approximately \$13,000 per month, \$156,000 per year beginning in FY25

There may be additional costs for ongoing support but those costs would be determined once more information is known about the technical delivery methods that are possible which would require multiple meetings of various stakeholders that support the voter registration system.
