## Part II: Narrative Explanation

### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

*Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.*

Compared to HB 1033, SHB 1033 has the following changes:

- Section 1(2) would include home composting among the standards to be considered in developing advisory committee recommendations.
- Section 1(5) would add a hospitality business representative from a statewide organization to the advisory committee.
- Section 1(6) would require the Director of Ecology to invite any interested Indian tribes to participate on the advisory committee.

These changes would not change the fiscal impact to Ecology.

Under current law, Chapter 70A.205 RCW (Solid Waste Management-Reduction and Recycling), the state has a goal to reduce organic solid waste and food waste in landfills by 75 percent by 2030, relative to the 2015 levels.

Under current law, Chapter 70A.455 RCW (Plastic Product Degradability), Ecology and local governments have enforcement authority on labeling requirements for compostable products, beginning on January 1, 2024. The standards for labeling of plastic and compostable products are intended to reduce contamination of the waste streams handled by compost and organic material management.

Section 1 of this bill would require Ecology to contract with a third-party facilitator to convene an advisory committee to make recommendations to the legislature for the development of standards on the management of compostable products, with particular focus on food service products, by organics management facilities.

In developing the recommendations, the committee would be required to consider the following:

- The state's goals for managing organics, including food waste.
- The types of compostable products and amounts if known, sold in Washington.
- Consumer confusion caused by non-compostable products.
- Compostable standards related to the breakdown of products in Washington compost facility systems and home composting.
- How many Washington facilities accept compostable products.
- The percentage of compostable products sold in Washington compared to what is sent to compost facilities.
- Financial incentives for compost facilities accepting compostable packaging.
- Current laws related to compostable products.
- Local and national work products on compostable packaging.
- Policy options to address organic waste stream contamination and to increase the use of reusable and refillable items.

Ecology would be required to select representatives for the committee from impacted groups, to include those groups specified in the bill at a minimum.

Ecology and the facilitator would be required to convene the first advisory committee meeting by September 15, 2023, and convene meetings at least monthly thereafter through January 2024. The facilitator may hire subcontractors to research relevant information associated with compostable products and managing organic materials at organic management facilities.

The facilitator would be required to provide staff and support to the advisory committee meetings, draft reports, other materials for review by the committee, and submit a report to the legislature by March 1, 2024.

## **II. B - Cash receipts Impact**

*Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.*

## **II. C - Expenditures**

*Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.*

The expenditure impact to Ecology under this bill is estimated to be greater than \$50,000 in Fiscal Year (FY) 2024 to implement the requirements of section 1.

Implementation costs are estimated in the Model Toxics Control Operating Account (MTCA – Operating). MTCA supports the state’s responsibility for solid waste management, regulation, enforcement, technical assistance, and public education under Chapter 70A.205 RCW.

Section 1 would require Ecology to hire an independent third-party facilitator to convene a stakeholder advisory committee by September 15, 2023, to make recommendations on compostable products management. Ecology would be required to select the committee members.

Ecology assumes the hiring process for the third-party facilitator would begin in late FY 2023 in order to have the facilitator hired in time to convene the first committee meeting by September 2023. Ecology assumes the facilitator would hire a subcontractor for research services to gather and provide compostable packaging research on sales in state, current laws related to compostable packaging, consumer confusion, impacts to local composters, and other information for the advisory committee. Ecology assumes data on compostable plastic products sold into the state would not be readily available, therefore, the subcontractor would have to buy the data, if available, from a national source. Based on our previous experiences implementing a similar requirement under Chapter 70A.245 RCW and purchasing of national data to implement the E-Cycle Program, Ecology estimates \$150,000 for facilitation services and \$80,000 for research services and data purchases contract one-time in FY 2024.

Based on our experience implementing the stakeholder advisory committee under Chapter 70A.245 RCW, Ecology assumes:

- Ecology would select the committee members.
- The facilitator would hire a subcontractor to conduct further research, which would be provided to the committee.
- Ecology and the facilitator would convene the stakeholder advisory committee beginning in September 2023.
- The full stakeholder advisory committee would meet twice a month from September through February 15, 2024 (FY 2024), each meeting would be three to four hours long, and all meetings would be held remotely.
- The facilitator would establish subcommittees to discuss detailed topics and draft recommendations to bring back to the full advisory committee for consideration.
- Committee members would participate in the research, writing, commenting, drafting, and editing of the committee recommendations. The facilitator would work with committee members to reach consensus on the recommendations and record dissenting opinions where consensus is not reached.

- The facilitator would draft the legislative report based on the committee drafted recommendations and submit the report to the legislature by March 1, 2024.

As a stakeholder advisory committee member, Ecology would: select advisory committee members, attend meetings, provide technical expertise, conduct additional research and analysis as required to contribute to the subcommittee recommendations, and draft, review, edit and comment on all recommendations. Ecology’s representative on this committee would provide regular updates to agency management on the status and progress of the committee work. Ecology would also manage the facilitation contract and provide oversight. Ecology estimates 0.67 FTE of an Environmental Planner 4 in FY 2024 (one-time).

Ecology assumes the final report submitted by March 1, 2024, would be based on the available information that could be obtained within the given timeframe and budget. Additional research, time, and funding may be required in the future if there are considerations the committee is not able to make in the March 2024 report due to insufficient available information by that date.

THE TOTAL EXPENDITURE IMPACT to Ecology under this bill is estimated to be:

FY 2024: \$339,993 and 0.77 FTE

Notes on costs by object:

Salary estimates are current biennium actual rates at Step L.

Benefits are the agency average of 36% of salaries.

Professional Services Contracts includes \$150,000 for facilitation services, \$80,000 for research services and data purchases contract in FY 2024.

Goods and Services are the agency average of \$5,224 per direct program FTE.

Travel is the agency average of \$1,563 per direct program FTE.

Equipment is the agency average of \$1,031 per direct program FTE.

Agency Administrative Overhead is calculated at the federally approved agency indirect rate of 28.75% of direct program salaries and benefits, and is shown as object 9. Agency Administrative Overhead FTEs are included at 0.15 FTE per direct program FTE, and are identified as Fiscal Analyst 2 and IT App Development - Journey.

**Part III: Expenditure Detail**

**III. A - Operating Budget Expenditures**

Account	Account Title	Type	FY 2024	FY 2025	2023-25	2025-27	2027-29

## Part II: Narrative Explanation

### II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

*Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.*

SHB 1033 is the substitute bill for HB 1033. SHB 1033 includes changes to Section 2 (d) and adds Section 5 (m) and 6. None of these changes impact WSDA.

SHB directs the Department of Ecology to contract with an independent third party to convene a stakeholder advisory committee that will provide guidance for and recommendations on how to develop standards for the management of compostable products, by composting and other organic materials management facilities. The bill specifically calls out who must serve on the committee, what concerns the committee must address, and dictates that a final report be submitted by March 1, 2024.

This bill amends chapter 70A.205, which establishes a comprehensive statewide program for solid waste handling, and solid waste recovery and/or recycling, to prevent land pollution and conserve the natural, economic, and energy resources of Washington.

As specified in section 1.(5)(k), the Washington State Department of Agriculture (WSDA) is required to provide a representative for the advisory committee. Section 1.(4) Specifies that meetings will be held monthly (minimum) beginning in September 2023, and at a minimum through January 2024.

Costs to WSDA include staff time for Natural Resource Scientist 4 to attend advisory committee meetings.

### II. B - Cash receipts Impact

*Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.*

No cash receipt impact.

### II. C - Expenditures

*Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.*

Assuming two 3-hr meetings per month for five months, there will be a total of 30 meeting hours required of each committee member. There may also be work required of the WSDA representative in between meetings (assumption of up to 15 hours).

45 hours of a WSDA Natural Resource Scientist 4, Range 64/Step L, to include salary, benefits, supplies, and overhead costs = \$3,683 per year.
